

Diamond Pro Matte

Diamond Pro Matte gives an understated, muted look to a vehicle's finish while protecting it at the same time. **MATTE FILM** also enjoys the same self-healing top coat chemical properties as its glossy counterparts. To self-heal, a combination of hard and soft co-polymers reacts to rebind and retain their shape. Enjoy a smooth, satin overlay that brings a new quality to any car's paint.

Self-healing

The ability to heal is an advanced feature inside the film's coating called thermoplastic poly-urethane (TPU), a flexible thermoplastic layer that can self-heal once damage occurs. Slight abrasions, scratches or outdoor hazards can be averted with this advanced chemical property.

Matte Finish

The matte, satin finish of the top-coat gives the paint a smooth, muted look, instantly improving the aesthetic appeal of the vehicle. It changes the look of the car on the road, while also keeping the paint underneath as new as possible.

Hydrophobic

The water resistant top coat prevents rain and other liquids from resting on the vehicle's paint, potentially causing rust or a loss of luster and brilliance.
